- Broken screens replaced
- Keyboards replaced
- Memory Installed / Upgraded
- Viruses Removed
- Hard Drives Replaced
- Broken Fans replaced
- Power supplies replaced
- System restored
- Windows upgrades

Replacement of Broken Laptop Screens

Laptop screens often fail or get broken. Either the backlight goes wrong or someone stands on your laptop by mistake and breaks the screen. Either way it happens, we can source a quality replacement and have it replaced within 3 working days (depending on stock and availability).

We can replace broken laptop screens for customers in Cheltenham or Gloucestershire. We can replace screens for most brands of laptops, so please contact us with your requirements and we'll get back to you very quickly with a quotation and a time frame.

Laptop Keyboard Replacement

Keyboards get worn out, keys fall off or something gets spilled and makes the keyboard unusable. if this is the case, we can get you a replacement keyboard and replace it for the old one in roughly three working days. This depends on stock and our suppliers but generally, we can have a fast turn around for the replacement of laptop keyboards in Cheltenham and

Gloucestershire.

All major brands are catered for and many non-standard brands can be sourced too, so please contact us with your requirements and we'll get straight back to you.

Memory (RAM) Upgrades / Replacements

In our opinion the more RAM the better, especially if you like to watch videos, edit photos play games and run a number of different programmes at the same time.

Windows, 32 bit operating systems (which are standard) won't use more than 3.4 Gb of RAM and so the maximum you'd want to install is 4 Gb RAM and with prices coming down all the time, adding more RAM can enhance your laptop and increase its speed and usability. Adding more RAM is a straight forward and cost effective laptop upgrade.

Viruses / Spyware Removal

Even with an anti-virus programme and an anti-spyware programme, your laptop can still become infected. The reason is that no single programme can stop everything and if you don't keep what you have up-to-date, you'll leave yourself open to infection.

Should you find yourself in the unfortunate position of having picked up a virus or spyware (trojan, malware), we can quickly and efficiently clean your laptop allowing you to continue using it. We will also provide you with "safe practices" tips about how to avoid getting infected and suggest the best products on the market.

Hard Drives Replaced

Hard drive failure is something we should all be prepared for because it is going to happen at some point.

With all the moving parts involved in a hard drive and the tiny parts now used, laptop hard drive failure is a fairly common occurrence (we've suffered a failure ourselves) but we can help rescue your data and get a new hard drive installed and up and running again in no time.

Don't be worried about the costs these days. A 320 Gb laptop hard drive (2.5") costs around 65 pounds for a good quality one. There are cheaper ones out there, but stick to good quality and they'll last longer.

Faster Hard Drives

A faster laptop hard drive is also a good performance improvement. Standard laptop hard drives spin at 5,400 RPM (some are even slower) and the speed in which a hard drive spins, effects the speed in which your computer will perform.

We can take your present hard drive, create a snap shot image of that drive and install a faster (and larger if you want), laptop hard drive, which will spin at 7,200 RPM. The speed increase means your laptop can access the information quicker which in turn increases performance when it comes to booting up, programme start up, read / write functions and file search.

A faster laptop hard drive is another fairly cost effective laptop upgrade.

Whatever your laptop repair requirements we can help. even if the mainboard for your laptop needs replacing, we can usually, depending on the age of the laptop source a replacement which is common for graphics and sound card issues as they are generally part of the mainboard.

Of course, it's not always a breakage. You might want to improve your laptop by adding more memory or upgrading the operating system (OS). You might have a keyboard with faded lettering and want a new one.

Whatever you need doing, we can assist, **so please call our Cheltenham based laptop repair service on 01242 582011**
